Professional Summary

Azure Data Engineer with 2+ years of experience designing, developing, and deploying end-to-end ETL pipelines using Microsoft Azure. Proficient in Azure Data Factory (ADF), Azure Databricks, Azure SQL, and Azure Data Lake Storage. Skilled in SQL, PySpark, Python for large-scale data processing and transformation. Adept at building scalable Medallion Lakehouse architectures, implementing data governance with Unity Catalog, and delivering reliable batch and real-time pipelines across enterprise client environments.

Technical Skills

Programming Languages: Python, SQL, PySpark

Azure Services: Data Factory, Databricks, ADLS Gen2, Azure SQL

Data Engineering Tools: ETL Pipelines, Medallion Architecture, Delta Lake, ADF Pipelines

Databases: PostgreSQL, MS SQL Server

Cloud (AWS): S3, RDS, CloudWatch, IAM

Professional Experience

Associate Software Engineer — Accenture

2023 – 2025

- Designed and developed a modular ETL platform on Microsoft Azure, integrating data from SQL Server, REST APIs, SFTP, and cloud/on-prem sources supporting CSV, JSON, and API-based ingestion – processing 50K–100K records per run across 10+ enterprise client environments.
- Reduced client onboarding time by 30% through reusable ingestion and validation modules, enabling faster multi-client schema handling and integration across heterogeneous cloud-to-cloud and cloud-to-on-prem systems.
- Built automated validation workflows and data consistency checks, reducing downstream data errors by 40% and improving pipeline reliability under strict SLA requirements across enterprise client accounts.
- Automated data mapping and file operations within the ETL platform, saving 20+ hours/week of manual effort; owned monitoring and incident response for production pipelines, performing root-cause analysis and restoring pipelines within defined SLAs to maintain high availability.
- Collaborated with business analysts, senior engineers, and downstream consumers to translate functional requirements into optimized data models, workflows, and analytics-ready schemas.
- Recognized with the Sparking Star Award for consistent ownership and delivery of stable, high-quality data integrations.

Education

Bachelor of Engineering in Electronics and Communication Engineering

2019 – 2023

SNS College of Technology, Coimbatore, India — CGPA: 9.04

Key Projects

Project 1: Azure Financial Data Lakehouse (Medallion Architecture)

[GitHub](#)

Tech Stack: Python, PySpark, Spark SQL, Azure Data Factory, Databricks, Delta Lake, ADLS Gen2, Structured Streaming, Unity Catalog, Azure SQL, Azure Key Vault

- Designed and built an end-to-end data lakehouse on Azure Data Lake Gen2 processing 51,000+ financial transactions across Bronze, Silver, and Gold layers with full data lineage tracking via Databricks Unity Catalog.
- Built a metadata-driven orchestration layer in Azure Data Factory where new data sources are onboarded via a config file with zero code changes, supporting 4 parallel ingestion streams and reducing ingestion volume by 80% through incremental watermark loads.
- Implemented SCD Type 2 for customer dimension tracking with automated change detection and enforced PII masking (email, phone, date of birth) at the Silver layer using role-based access controls.
- Applied upsert logic with Delta Lake for idempotent data writes and built a data quality pipeline with automated validation rules and lineage tracking using Delta Live Tables.

Project 2: Cloud-Native Data Engineering Pipeline on AWS (S3 → RDS PostgreSQL)

[GitHub](#)

Tech Stack: Python, SQL, AWS S3, RDS, CloudWatch, Git

- Designed and implemented a cloud-native batch pipeline ingesting semi-structured JSON from S3, transforming via boto3/pandas, and loading analytics-ready data into PostgreSQL on AWS RDS.
- Implemented incremental and idempotent SQL-based loads into RDS, ensuring reliable re-processing without data duplication; integrated CloudWatch for execution logging and failure alerting.
